

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

so as to shew by the Effects the practicableness of the Invention, mentions thereupon, That he intends very shortly to try something in that kinde, of the success whereof he declares to have good hopes.

Monsieur *du Son*, that excellent Mechanician, doth also at this very present employ himself in *London*, to bring *Telescopes* to perfection, by grinding Glasses of a *Parabolical* Figure, by the means whereof he hopes to enable the Curious to discover more by a Tube of one Foot long, or thereabout, furnished with Glasses thus figured, then can be done by any other Tubes of very many times more that length : The success hereof will (its thought) shortly appear.

*An Advertisment of a way of making more lively Counterfaits of Nature in Wax, then are extant in Painting : And of a new kinde of Maps in a low Relievo ; both practised in France.*

This was communicated by the Ingenious Mr. *John Evelyn*, to whom it was sent from *Paris* in a Letter, as followeth :

Here is in our Neighborhood a *French-man*, who makes more lively Counterfaits of Nature in *Wax*, then ever I yet saw in *Painting*, having an extraordinary address in modelling the Figures, and in mixing the Colours and Shadows ; making the Eyes so lively, that they kill all things of this Art I ever beheld : He pretends to make a visit into *England* with some of his Pieces.

I have also seen a new kinde of *Maps* in low *Relievo*, or Sculpture: For example, the Isle of *Antibe*, upon a square of about eight Foot, made of Boards, with a Frame like a Picture: There is represented the Sea, with Ships and other Vessels Artificially made, with their *Canons* and Tackle of Wood fixed upon the surface, after a new and most admirable manner. The Rocks about the Island exactly form'd,

as

as they are upon the Natural Place ; and the Island it self, with all its Inequalities, and Hills and Dales ; the Town, the Fort, the little Houses, Platform, and Canons mounted ; and even the Gardens and Platforms of Trees, with their green Leaves standing upright, as if they were growing in their Natural Colours : In *fine*, Men, Beasts, and whatever you may imagine to have any protuberancy above the level of the Sea. This new, delightful, and most instructive form of *Map*, or *Wooden Country*, you are to look upon either *Horizontally*, or *sidelong*, and it affords equally a very pleasant object.

*Some Anatomical Observations of Milk found in Veins, instead of Blood ; and of Grasse, found in the Wind-pipes of some Animals.*

A curious Person wrote not long since from *Paris*, that there they had, in the House of a Physician, newly open'd a Mans Vein, wherein they found *Milk*, instead of *Blood*. This being imparted to Mr. *Boyle* at *Oxford*, his Answer was, That the like Observation about *white Blood*, had been made by a Learned Physician of his acquaintance, and the thing being by him look'd upon as remarkable, he was desirous to have it very circumstantially from the said Physician himself, before he would say more of it. The next Moneth may bring us in this Account.

The other Particular, mention'd in the Title of this Head, came in a Letter, sent also by Mr. *Boyle*, in these words :

I shall acquaint you, That two very Ingenious Men, Dr. *Clark*, and Dr. *Lower*, were pleas'd to give me an account of a pretty odde kinde of Observation : One of them assuring me, That he had several times, in the Lungs of *sheep*, found considerable quantity of Grasse in the very Branches of the *Aspera Arteria* : And the other relating to me, That a few Weeks since, He, and a couple of Physicians,
